

The use of eco-friendly materials across all UK funerals is growing, with crematorium operators becoming increasingly concerned over emissions from traditional materials and woodland burials continuing to grow in popularity.

jfunerals™ coffins and accessories are made from the golden silky fibres of the jute plant, which is naturally biodegradable and has minimal CO₂ emissions, so providing a dignified, robust and eco-friendly alternative.

Corchorus olitorus

Tossa Jute (*Corchorus olitorus*) is a long shiny vegetable fibre that is soft and silky, yet has exceptional strength. Our jute is sourced from India and Bangladesh where McGregor Balfour have built up long term relationships with ethically managed companies.
